Where noise from the quarry was inaudible, quarry noise contribution has been estimated to be equal to or less than 10 dB below the background noise level (LA90) measured during the traffic lulls. This is considered a conservative estimate of quarry contributions.

N/A Quarry not in operation

- \* Operations were audible during the morning shoulder measurement at location 4, including a hum from machinery and occasional "bangs" and "clangs" *likely* to have been caused by quarry operations. The estimated quarry LAeq15min noise contribution exceeded the relevant EPL LAeq, 15min limit by 3 dB. An exceedance of 3 dB is considered to be marginal by the EPA as defined in Table 4.1 of the NPfl (EPA 2017).
